8k Video Game | 4k Video Game | 3 Monitor Video Game

8k video game releases in 2018 are set to push the hi res video gaming resolutions higher than ever before. 4k video games have become more prevalent now that more gamers are opting to drop the 1080p resolution in favor of the higher pixel count of the 4k. While everyone else is catching up Appsif is moving forward. With many 8k displays in development and pc gamers known affinity for multiple display set ups we felt the need to future proof the game with the inclusion 8k, 4k, 1080p and 720p to allow

players on older systems to still play the game.

Interesting game did an episode on it. https://www.youtube.com/watch?v=vf_G8UstH0s. This is an extremely basic game, with simple AI, simple controls, a flat linear world and run and shoot gameplay. I would not recommend this for any serious gamer.

Cons:

- Runs in a window, not fullscreen
- No ability to configure keyboard/mouse controls
- No ability to invert the mouse Y-axis
- No audio controls
- AI simply charges, no intelligence
- Linear world

Pros:

- Decent graphics. Text to speech.
- A single 3d enemy model with different colors.
- Enemies have no coding except to march in lockstep toward the player.
- Ugly environments, terrible gunplay.
- Avoid.

<https://youtu.be/V9uuMImZ3nK4>. Solid game. Independent release, so it has it's quirks, but overall pretty enjoyable. Definitely challenging, and has a subtle kind of old school feel for anyone who likes a bit of nostalgia.
